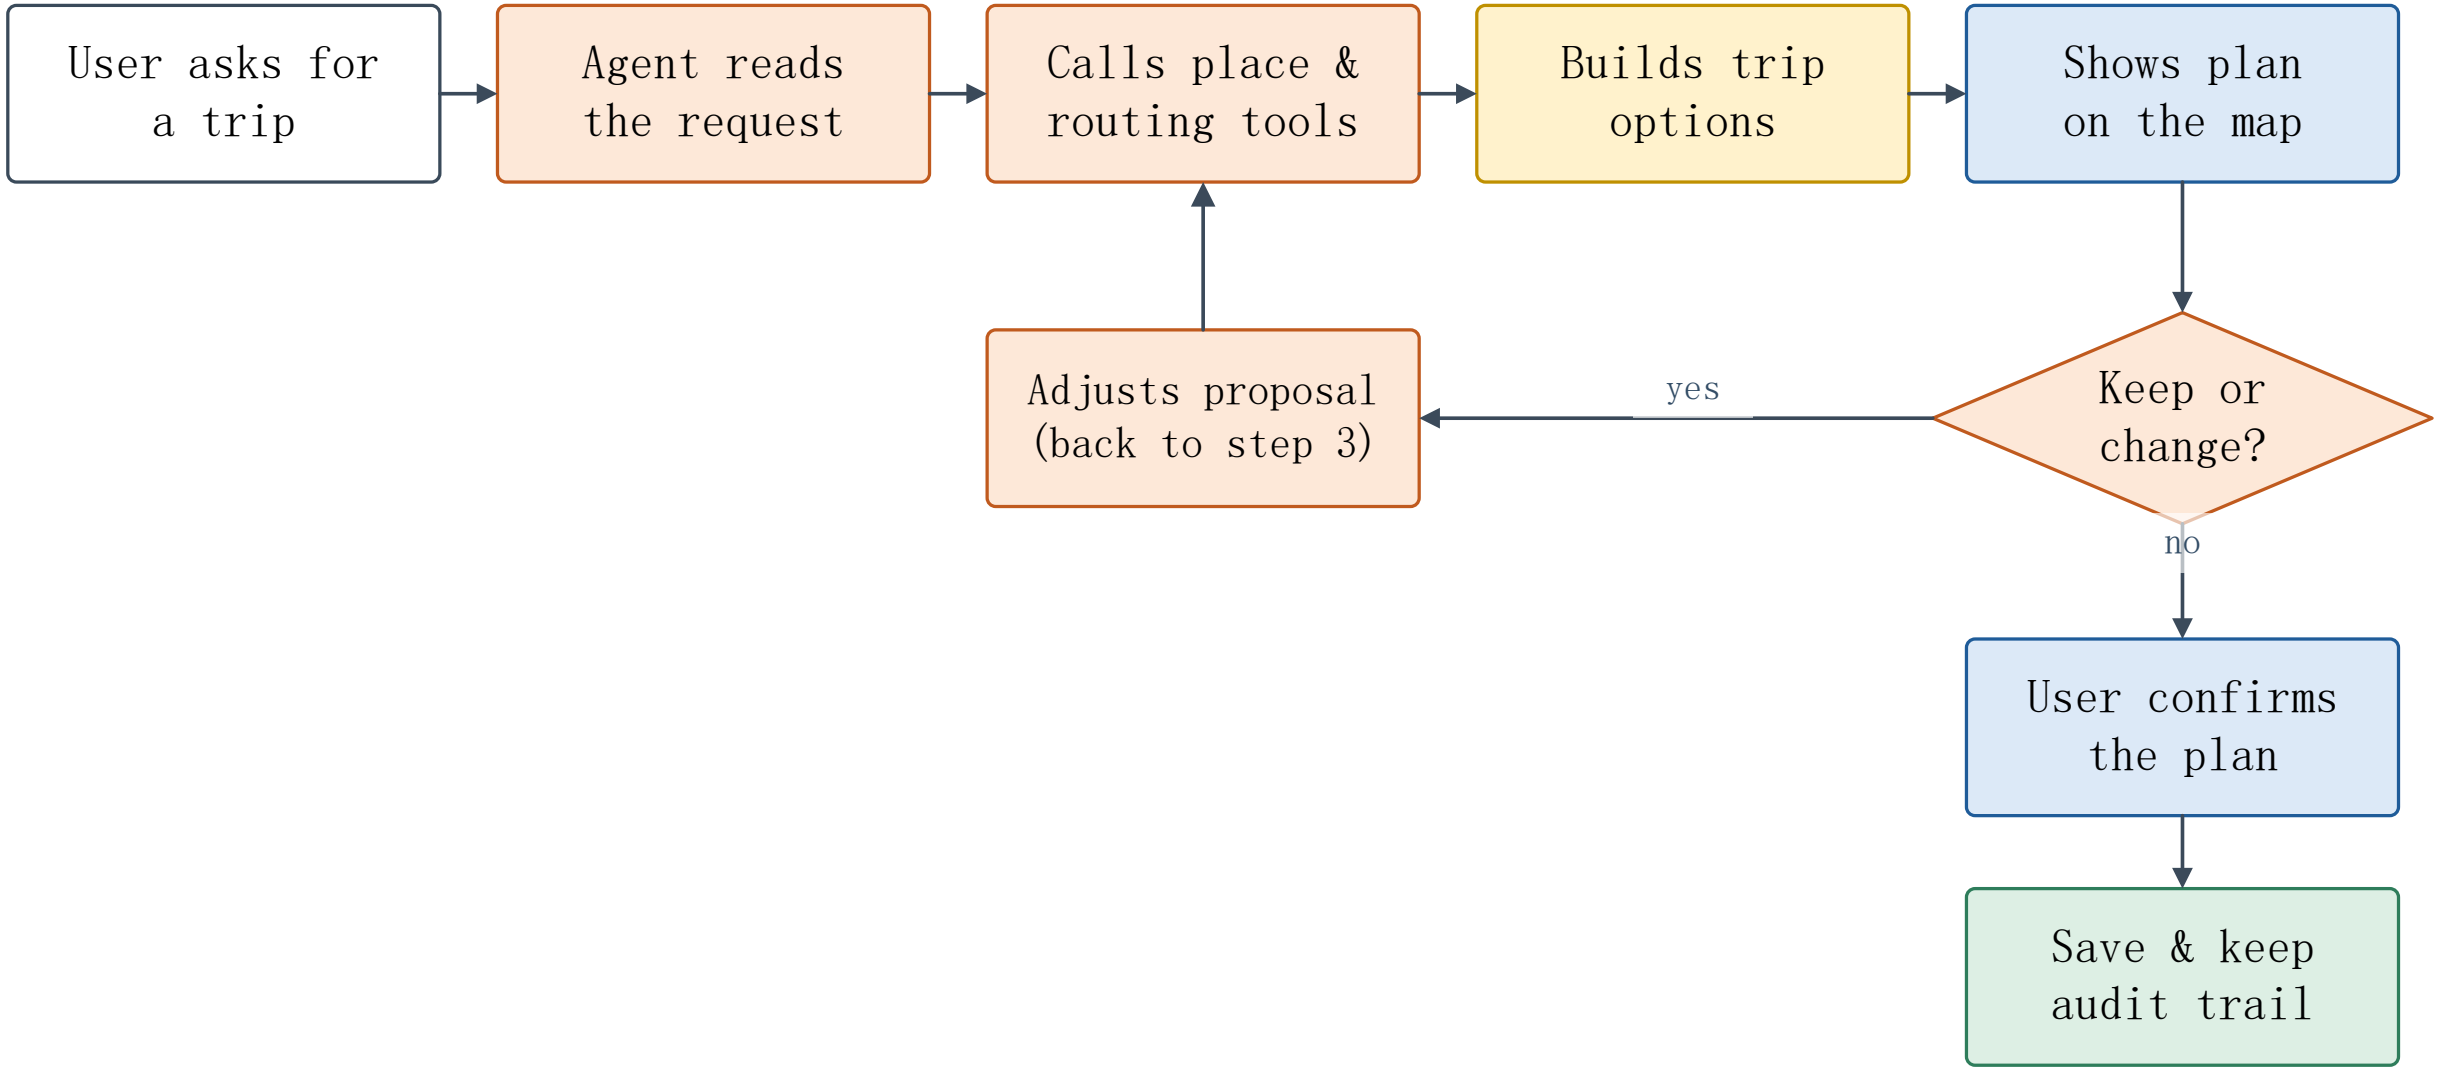
CityNexus | User Request Flow

Classroom demo • from CityNexus verified architecture
generated 2026-10-29 01:58

The Agent only proposes; the user's confirm writes - with an audit trail.



Code evidence for the loop and branches, moved off the classroom page.

Only two exits exist at the end.

Only 'no' writes anything and leaves an audit trail.

'Yes' only produces a new proposal: the loop arrow sends the flow back to 'Calls place & routing tools'; the itinerary table does not move.

The loop is grounded in real code: request_replan is a whitelisted gateway tool, proposals land as CANDIDATE, and switching the active plan requires an accept carrying an Idempotency-Key.

The forensic version with file & line references: Visio/03_CityNexus_Agent_Workflow.vsdx.
